

# STRUCTURAL FURLERS HIGH TECHNOLOGY!

Under its sleek figure lies a wealth of technology.

Installed for 10 years on ocean racing yachts.

KFx structural furlers are the perfect balance of performance and safety.

Installed with a structural anti-torsion stay, it replaces a traditional forestay or inner stay.

The latest Karver furling showcase:  
- 8 months of Research & Development.

- Hundreds of numerical simulations.
- Dozens of prototypes.
- Many tests on various bearing types (ceramic, titanium, beryllium bronze, HR steel, etc.).

The result is a line of furling units that are compact, light and offer the best performance and ease of use. Karver is proud to be the benchmark in this category and is still unmatched by its competitors.

Our range of furling systems fit boats from 6 to 90 meters.

WORKING LOAD  
**12 T**

WEIGHT  
**1960 g !**

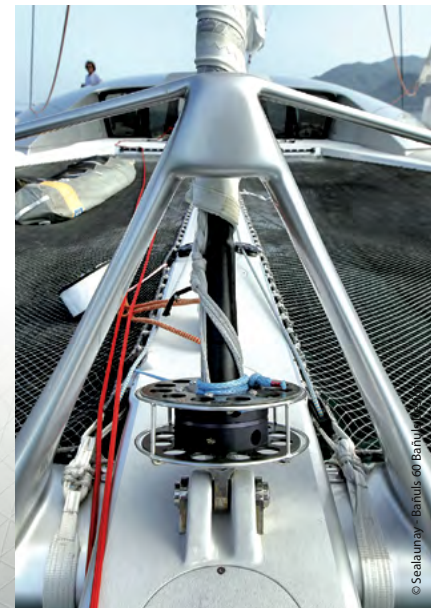

## KARVER ADVANTAGES

- Most compact system.
- Light weight.
- Locking mechanism from the cockpit.
- Low friction bearing.
- Carbon fibre spool available.

Low friction

A Karver exclusive: our low friction bearings have been engineered using composites materials from the aerospace industry.

Single line drum Available from KF8
