

Boom sliders and accessories

Seldén boom sliders are designed to allow mainsheet blocks to attach directly to the eye, and locate directly into the in-boom track with screw pads to give a strong grip.

A high-load boom slider for high-load vang applications is also available.

The new Seldén deck protector has been designed to fit into the outboard end of any Seldén dinghy boom to

protect the deck of the boat from the boom when it is dropped into the boat. The simple composite fitting is pushed into the lower track, so it be easily fitted to existing as well as new dinghy booms.

The range also includes various other boom parts, including pole stowage loops, reefing hooks and kicker levers.

Valley cleat

	Art. No.	Description	Suitable for
	432-013	Valley cleat	

Sliders
