

RCB, full-batten system

For retro-fitting on E-sections and D-sections

The Seldén RCB (Round Circulating Ballbearings) full-batten system facilitates full-batten sail management, and makes it much easier to set and reef the mainsail. The system is based on linear ball races and recirculating balls. The cars run with hardly any friction at all, even under the high compression loads produced by full-length battens.

The track and cars are made from aluminium which, together with Torlon ball bearings, makes the system strong and durable.

RCB batten car with eye.

RCB batten car with M10 bolt.

Universal

The attachment can be used in conjunction with most batten fittings. It provides the full freedom of movement so essential for easy operation and long life.

Locking fork, Art. No. 511-591.
Plastic washer, Art. No. 164-039.

Easy to fit.

Practical

The swivel fitting can easily be removed from the car – an advantage when the sail is to be fitted or removed from the mast. It can also be sent separately to the sailmaker for fitting to the sail.

High performance lubrication

Lubrication for Torlon® ball bearings,
Art. No. 312-534.
One drop will do!

Easy to fit

The RCB track, which comes complete with screws and special nuts, is easy to fit on a Seldén mast. Just push the track into the original mast groove and tighten up. The attachment system is tailored to Seldén masts, but it will also fit those with a similar luff gap (approx. 6 mm or 1/4"). Other masts can be fitted with the track by screwing it directly in place.

For Isomat, see remarks on next page.
